

Clean data. Clear visibility. Confident decisions.

Built for finance leaders who need clarity fast

Finance teams need accurate structure data to support tax provisioning, funding decisions, audits and board reporting. Athennian gives finance a centralized platform to access real-time ownership, signatory and jurisdictional data, streamlining collaboration with legal and compliance, and reducing risk across the business.

Solving finance governance challenges

Fragmented Structure Data

Ownership, equity, and entity status live across spreadsheets or outdated systems, making it difficult to produce accurate reporting.

Slow Cross-Functional Collaboration

Finance, tax, and legal teams often operate in silos, leading to version mismatches, audit delays, and missed compliance obligations.

Unclear Ownership & Signatory Status

Missing or outdated governance data creates bottlenecks in intercompany transactions, tax provisioning, and financial audits.

Poor Visibility Across Global Entities

Finance teams need to understand how cash, tax, and control flow through complex international structures—but often lack the tools.

What Athennian delivers

- **Single Source of Truth for Entity Data**

Track every entity, filing, and ownership structure in one centralized system with real-time access.

- **Automated Workflows & Document Control**

Ensure deadlines, filings, and approvals are tracked and executed with accuracy and audit trails.

- **Cross-Functional Integration**

Finance, legal, and compliance all work from the same data—no duplication, no misalignment.

- **Org Charts & Equity Mapping**

Visualize direct and indirect ownership across the corporate structure to support internal reporting and external audits.

- **API Integration with ERP & Reporting Systems**

Real-time sync with financial systems ensures structure data matches reporting and treasury actions.

Platform features

Centralized legal entity and equity data

Dynamic org charts and control tracking

Jurisdictional compliance workflows and alerts

Integrated document management and approvals

Granular role-based access and full audit history

API integrations with ERP and planning tools

Results that matter

- ✓ Faster and more accurate board and investor reporting
- ✓ Stronger financial compliance and audit readiness
- ✓ Aligned operations across finance, legal and tax
- ✓ Better decisions with reliable, up-to-date structure data
