

Streamline structure data. Simplify reporting. Enable global tax strategy.

Built for modern multinational tax operations

In-house tax teams are facing increased pressure to navigate complex global structures and rising regulatory demands like OECD Pillar Two. Meeting these requirements means knowing exact ownership and control across jurisdictions to assess tax obligations. Athennian centralizes entity data, delivers real-time ownership visibility and automates workflows to simplify compliance and reduce risk.

Solving tax governance challenges

Disjointed Entity & Ownership Data

Spreadsheets and outdated systems limit access to reliable legal entity and structure information.

Complex Multinational Structures

Cross-border holdings, transfer pricing scrutiny and reporting obligations create heavy administrative load.

High Stakes Tax Reporting Requirements

Tax provisioning, country-by-country reporting and effective tax rate calculations require fast access to complete and current data.

Limited Cross-Functional Alignment

Tax teams often operate independently of legal or finance, which increases risk and inefficiency.

What Athennian delivers

- **Real-Time Legal Entity Data**

Access a centralized view of all legal entities, including ownership, jurisdiction and purpose, without chasing spreadsheets or email updates.

- **Audit-Ready Document Management**

Track filings, registrations and ownership changes with full version control and automated reminders.

- **Secure Access for Tax Advisors & Internal Teams**

Enable seamless, permission-based collaboration with external providers or global business units.

- **Dynamic Org Charts & Ownership Visualization**

Quickly visualize legal, equity and beneficial ownership structures to support transfer pricing, restructuring and reporting.

- **Integrated Compliance Workflow Support**

Simplify collaboration with legal and finance by centralizing tax-sensitive documents and data in one shared platform.

Platform features

Centralized legal entity and structure data

API integrations to ERP and tax reporting systems

Jurisdictional compliance tracking with automated workflows

Document management with change history and audit trails

Interactive ownership charts for direct and indirect ownership

Role-based access for internal stakeholders and outside counsel

Results that matter

- ✓ Fewer missed filings and regulatory errors
- ✓ Reduced audit prep time and documentation gaps
- ✓ Stronger compliance posture across the enterprise
- ✓ Better collaboration with legal, tax and finance
